

SIMATS ENGINEERING

MCQ Test

Course Name:	Software Testing	Course Code:	CSA37
Student Name:	Ganesh Karthick M	Reg. No.:	192321138
Section / Batch:		Date:	07-10-2026

COURSE OUTCOME COVERED

CO1: Apply software testing principles to enhance the effectiveness of software quality assurance and improve defect detection strategies.

Assessment Tool Weightage: 20%

Sl. No	MCQ Questions	Answer	Bloom's Level
1	A team applies systematic test design techniques during development. This reflects: a) Debugging b) Testing as an engineering activity c) Maintenance d) Deployment	b) Testing as an engineering activity	3
2	If a project skips defined testing processes, what is the likely outcome? a) Faster delivery with high quality b) Increased defects in production c) Reduced testing cost only d) Improved documentation	b) Increased defects in production	3
3	Selecting test cases based on requirements demonstrates: a) Random testing b) Process-driven testing c) Ad hoc testing d) Maintenance testing	b) Process-driven testing	3
4	Applying equivalence partitioning is an example of: a) Debugging b) Test design technique c) Coding standard d) Deployment activity	b) Test design technique	3
5	A tester identifies missing requirements during testing. This shows: a) Coding error b) Process gap c) User error d) Hardware issue	b) Process gap	3
6	Following a structured testing lifecycle ensures: a) Random defect detection b) Improved software quality c) Less documentation d) No defects	b) Improved software quality	3
7	Which activity best represents testing as a process? a) Writing code b) Executing test cases systematically c) Deploying software d) User training	b) Executing test cases systematically	3
8	A tester reuses test cases from a repository. This supports: a) Efficiency in testing b) Increased coding errors c) Reduced coverage d) Random testing	a) Efficiency in testing	3
9	If defects are tracked and analyzed, it improves: a) Coding speed b) Software quality process c) Deployment time d) User interface	b) Software quality process	3
10	Applying boundary value analysis helps to: a) Increase documentation b) Detect edge-case defects c) Reduce execution time d) Avoid testing	b) Detect edge-case defects	3

Sl. No	MCQ Questions	Answer	Bloom's Level
11	A tester validates system behavior against requirements. This is: a) Verification b) Validation c) Debugging d) Coding	b) Validation	3
12	Detecting defects before release reduces: a) Development effort b) Maintenance cost c) Coding standards d) Testing scope	b) Maintenance cost	3
13	Applying testing principles ensures: a) Zero defects guarantee b) Early defect detection c) No testing needed d) Faster coding	b) Early defect detection	3
14	Which principle suggests testing all inputs is impossible? a) Exhaustive testing b) Exhaustive testing is impossible c) Early testing d) Defect clustering	b) Exhaustive testing is impossible	3
15	A tester focuses on frequently failing modules. This uses: a) Random testing b) Defect clustering principle c) Regression testing d) Smoke testing	b) Defect clustering principle	3
16	If testing starts early in SDLC, it helps: a) Reduce defects cost b) Increase coding errors c) Delay project d) Skip documentation	a) Reduce defects cost	3
17	A tester designs test cases independently from developers. This ensures: a) Bias b) Objectivity c) Delay d) Redundancy	b) Objectivity	3
18	A tester reviews requirements for errors. Role performed is: a) Developer b) Tester c) Manager d) User	b) Tester	3
19	Reporting defects clearly is part of: a) Coding b) Tester's responsibility c) Deployment d) Maintenance	b) Tester's responsibility	3
20	A tester collaborates with developers to fix bugs. This shows: a) Isolation b) Teamwork c) Delay d) Redundancy	b) Teamwork	3
21	A requirement ambiguity causes defects. Origin is: a) Coding b) Requirements phase c) Testing phase d) Deployment	b) Requirements phase	3
22	Incorrect algorithm implementation leads to: a) Requirement defect b) Design defect c) Coding defect d) Testing defect	c) Coding defect	3
23	Missing validation checks are example of: a) Design defects b) Coding defects c) Requirement defects d) Deployment defects	b) Coding defects	3
24	Poor UI design causing confusion is: a) Coding defect b) Design defect c) Requirement defect d) Hardware defect	b) Design defect	3
25	A system crash due to memory leak is: a) Requirement defect b) Coding defect c) Design defect d) Documentation defect	b) Coding defect	3

Sl. No	MCQ Questions	Answer	Bloom's Level
26	Classifying defects based on severity helps: a) Ignore defects b) Prioritize fixing c) Delay release d) Increase cost	b) Prioritize fixing	3
27	A critical defect impacts: a) Minor feature b) Core functionality c) UI color d) Documentation	b) Core functionality	3
28	A minor defect example is: a) System crash b) Login failure c) Typo error d) Data loss	c) Typo error	3
29	Defect classification helps testers to: a) Ignore bugs b) Organize defects c) Skip testing d) Increase errors	b) Organize defects	3
30	A defect repository is used to: a) Store code b) Store test cases c) Store defect details d) Store UI designs	c) Store defect details	3
31	Reusing defect data helps in: a) Predicting issues b) Increasing bugs c) Reducing tests d) Skipping phases	a) Predicting issues	3
32	A defect repository improves: a) Code complexity b) Testing efficiency c) User interface d) Deployment speed	b) Testing efficiency	3
33	Logging defects with details ensures: a) Confusion b) Traceability c) Delay d) Redundancy	b) Traceability	3
34	A tester uses past defect data to design tests. This is: a) Random testing b) Experience-based testing c) Debugging d) Deployment	b) Experience-based testing	3
35	Incorrect login validation is an example of: a) Functional defect b) Performance defect c) Security defect d) UI defect	a) Functional defect	3
36	Slow response time is a: a) Functional defect b) Performance defect c) UI defect d) Coding standard	b) Performance defect	3
37	Unauthorized data access indicates: a) UI defect b) Security defect c) Functional defect d) Design defect	b) Security defect	3
38	Missing button functionality is: a) Functional defect b) Security defect c) Performance defect d) Hardware defect	a) Functional defect	3
39	Poor alignment in UI is: a) Functional defect b) UI defect c) Security defect d) Design defect	b) UI defect	3
40	Applying testing principles avoids: a) Coding b) Redundant tests c) Deployment d) Maintenance	b) Redundant tests	3
41	A tester validates outputs using expected results. This is: a) Debugging b) Test execution c) Coding d) Maintenance	b) Test execution	3
42	If defects are not tracked, it leads to: a) Better quality b) Poor traceability c) Faster delivery d) No impact	b) Poor traceability	3
43	Applying test process ensures: a) Random results b) Structured testing c) No defects d) No planning	b) Structured testing	3
44	Test case design based on requirements ensures: a) Low coverage b) High coverage c) No defects d) Less effort	b) High coverage	3

Sl. No	MCQ Questions	Answer	Bloom's Level
45	Early testing reduces: a) Defect cost b) Code size c) UI design d) Deployment time	a) Defect cost	3
46	A tester identifies repeated defects. This indicates: a) Good design b) Poor process c) No issue d) Perfect testing	b) Poor process	3
47	Reviewing test results helps: a) Ignore defects b) Improve quality c) Skip testing d) Reduce effort	b) Improve quality	3
48	A tester applies regression testing to: a) Add features b) Ensure fixes work c) Deploy software d) Design UI	b) Ensure fixes work	3
49	Identifying root cause of defects helps: a) Increase bugs b) Prevent recurrence c) Delay testing d) Skip coding	b) Prevent recurrence	3
50	A test plan ensures: a) Random execution b) Organized testing c) No testing d) No defects	b) Organized testing	3
51	Applying defect classification improves: a) Testing cost b) Fix prioritization c) Coding errors d) UI design	b) Fix prioritization	3
52	A tester uses historical defect trends. This helps in: a) Ignoring defects b) Risk-based testing c) Deployment d) Coding	b) Risk-based testing	3
53	Testing ensures product meets: a) Developer needs b) User requirements c) Tester goals d) Manager plans	b) User requirements	3
54	A defect due to wrong requirement interpretation is: a) Coding defect b) Requirement defect c) UI defect d) Hardware defect	b) Requirement defect	3
55	Applying process standards ensures: a) Poor quality b) Consistent quality c) No testing d) Random output	b) Consistent quality	3
56	A tester documents defects clearly. This helps: a) Developers fix quickly b) Increase errors c) Delay release d) Reduce quality	a) Developers fix quickly	3
57	A defect repository is analyzed to: a) Increase cost b) Improve testing strategy c) Skip testing d) Reduce quality	b) Improve testing strategy	3
58	A tester applies black-box testing. This focuses on: a) Internal code b) External behavior c) Hardware d) Deployment	b) External behavior	3
59	Defects found in testing phase indicate: a) Perfect design b) Earlier phase issues c) No issues d) Hardware problems	b) Earlier phase issues	3
60	Applying structured testing improves: a) Random results b) Product reliability c) Coding errors d) Deployment delay	b) Product reliability	3

Answer Key

1 – b	2 – b	3 – b	4 – b	5 – b	6 – b	7 – b	8 – a	9 – b	10 – b
11 – b	12 – b	13 – b	14 – b	15 – b	16 – a	17 – b	18 – b	19 – b	20 – b
21 – b	22 – c	23 – b	24 – b	25 – b	26 – b	27 – b	28 – c	29 – b	30 – c
31 – a	32 – b	33 – b	34 – b	35 – a	36 – b	37 – b	38 – a	39 – b	40 – b
41 – b	42 – b	43 – b	44 – b	45 – a	46 – b	47 – b	48 – b	49 – b	50 – b
51 – b	52 – b	53 – b	54 – b	55 – b	56 – a	57 – b	58 – b	59 – b	60 – b

Code of Conduct:

I Ganesh Karthick M / 192321138 (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.

I understand that any violation of academic integrity rules will result in disciplinary action.

RUBRICS FOR CALCULATION:

Criteria	Weightage (%)	Level 4 (Exemplary)	Level 3 (Proficient)	Level 2 (Developing)	Level 1 (Beginning)
Conceptual Understanding	30%	Demonstrates thorough understanding; answers all questions accurately	Shows good understanding with few errors	Partial understanding; several incorrect responses	Lacks understanding; majority of answers incorrect
Accuracy of Answers	25%	All answers are correct	Most answers are correct with minor mistakes	Some correct answers; frequent errors	Mostly incorrect answers
Application of Knowledge	20%	Correctly applies concepts to problem-based questions	Applies concepts with minor errors	Limited ability to apply concepts	Unable to apply concepts
Time Management	15%	Completes quiz well within time efficiently	Completes on time with minor delays	Requires extra time or rushes through questions	Unable to complete within given time
Question Interpretation	10%	Interprets all questions correctly and responds appropriately	Misinterprets a few questions	Often misinterprets questions	Unable to understand questions
